The invention relates to a conjugate comprising an injected bacterial effector protein and a carrier that targets the effector protein to a carrier that targets the effector protein to a carrier that targets the effector protein to a carrier that targets the invention is useful for a treatment selected from promoting or inhibiting survival of cells; promoting or inhibiting and reversing damage to cells; killing cells; promoting or inhibiting the growth of cells, apoptosis, release of an inflammatory mediator from cells, division of cells and treating intracellular infection and regulating nitric oxide release from cells. The invention is useful in the manufacture of a medicament for treating a neuronal cell, for intracellular infection, for interfering with intracellular trafficking, for modulating expression of cell-surface markers and for inhibiting secretion from cells. The invention is also useful for capting tron disease, Alzheimer' disease and wide range of disorders including muscle spasms such as chronic obstructive pulmonary disease (POPD), bronchitis and asthma. The present sequence is a fusion construct comprising Corynebacterium diphtheriae diphtheria toxin translocation domain (Dip HN domain) and botulinum type F neurotoxin from Clostridium function and an expression of field in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (Updated on 23-OCT-2003 to standardise OS field)

AAE35694 standard; protein; 657 AA 17-JUN-2003 (first entry) AAE35694; RESULT 9 AAE35694

BoNT/F-Hc-DipT HN domain-factor Xa linker fusion construct.

Apoptosis; therapy; inflammatory mediator; intracellular trafficking; infection; Prion disease; Alzheimer' disease; hypersecretion disorder; muscle spaem, CODP, Eronchitis; chronic obstructive pulmonary disease; torticolis; blephorospasm; asthma; funion protein; diphtheria toxin; BONI/F; translocation domain; HN domain; DipT; Hc; binding domain; botulinum type F neurotoxin.

Corynebacterium diphtheriae. Clostridium botulinum. Unidentified. 

Chimeric

φ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a conjugate comprising an injected bacterial effector protein and a carrier that targets the effector protein to a target cell. Pharmaceutical composition of the invention is useful for a treatment selected from promoting or inhibiting substitution and reversing damage to cells; killing cells; promoting or inhibiting and reversing damage to cells; killing cells; promoting or inhibiting the growth of cells, apoptosis, release of an inflammatory mediator from cells, division of cells and treating intracellular infection and regulating nitric oxide release from cells. The invention is useful in the manufacture of a medicament for treating a neuronal cell, for intracellular infection, for interfering with intracellular trafficking, for modulating expression of cell-surface markers and for inhibiting secretion from cells. The invention is also useful for thibiting secretion from cells. The invention is also useful for including muscle spasms such as blephorospasm, torticolis and construct comprising Corynabacterium diphtheriae diphtheria toxin translocation domain (DipT-HN domain), botulinum type F neurotoxin binding domain (BoNT/P-HC) from Clostridium botulinum and factor Xa linker peptide. This sequence is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                        Conjugate for modulating cell survival and cell growth, modulating release of inflammatory mediator from cells, comprises injected bacterial effector protein and a carrier that targets the protein to target cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         430
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 431 VGCNDTRYVGIRYFKVFDTELGKTEIETLYSDEPDPSILKDFWGNYLLYNKRYYLLNLLR 490

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAE07893;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 10
```

```
The invention relates to a non toxic polypeptide, for delivery of a therapeutic agent to a neuronal cell, which comprises a binding domain (carboxy terminal half of heavy chain (HC) of a neurotoxin, designated as HC) that binds to the neuronal cell and a translocation domain (amino terminal half of HC, designated as HN), that translocation domain (amino constructs) and is not a fragment or derivative of domain of a clostridial neurotoxin and is not a fragment or derivative of a HN domain of a clostridial toxin. Polypeptides of the invention are collise. The polypeptide constructs are useful for delivering therapeutic calls. The polypeptide constructs are useful to treat disorders of the CC substances to neuronal cells. They are useful to treat disorders of the CC substances to neuronal cells. They are useful to treat disorders of the CC is modified clostridial heavy chain-superoxide dismutase conjugate. This conjugate comprises bacterial Mn-superoxide dismutase conjugate. This conjugate comprises bacterial Mn-superoxide dismutase (MSOD), from CC translocation peptide from influenza virus and a neuronal cell-specific thinding a neuroperoxine that can be cleaved by factor Xa, thinding a virus and a neuronal cell-specific
                                                                                                                                                                                                                                                                                                                               New non toxic polypeptide for delivery of a therapeutic agent for the treatment of a CNS disorder comprising a binding domain that translocates the therapeutic agent into the neuronal cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           399 VFNYTQMISISDYINKWIFVTITNNRLGNSRIYINGNLIDEKSISNLGDIHVSDNILFKI 458
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 VGCNDTRYVGIRYFKVFDTELGKTEIETLYSDEPDFSILKDFWGNYLLYNKRYYLLNLLR 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            VGCNDTRYVGIRYFKVFDTELGKTEIETLYSDEPDPSILKDFWGNYLLYNKRYYLLNLLR

The invention relates to a non toxic polypeptide, for delivery of a therapeutic agent to a neuronal cell, which comprises a binding domain carboxy terminal half of heavy chain (HC) of a neurotoxin, designated as (carboxy terminal half of heavy chain (HC) of a neurotoxin, designated as terminal half of HC, designated as HN), that translocation domain (amino cagent into the neuronal cell, where the translocation domain is not a HN domain of a clostridial toxin. Polypeptides of the invention are a seaful for the treatment of a disease state associated with neuronal cells. The polypeptide constructs are useful for delivering therapeutic substances to neuronal cells. They are useful for treat disorders of the CNS including neurodegenerative diseases, stroke, epilepsy, brain tumours and infection. They are also useful in gene therapy. The present sequence is modified clostridial heavy chain-superoxide dismutase conjugate. This conjugate comprises bacterial hm.superoxide dismutase (MnSOD), from Bacillus stearothermophilus, linker that can be cleaved by factor Xa, translocation domain from diphtherial neurotoxin and a neuronal cell-cape present sequence capecific binding domain from botulinum neurotoxin type F (BONT/F)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New non toxic polypeptide for delivery of a therapeutic agent for the treatment of a CNS disorder comprising a binding domain that translocates the therapeutic agent into the neuronal cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             576 VFNYTQMISISDYINKWIFVTITNNRLGNSRIYINGNLIDEKSISNLGDIHVSDNILFKI 635

The invention relates to a non toxic polypeptide, for delivery of a therapeutic agent to a neuronal cell, which comprises a binding domain carboxy terminal half of heavy chain (HC) of a neurotoxin, designated as (carboxy terminal half of heavy chain (HC) of a neurotoxin damino cell, that binds to the neuronal cell and a translocation domain (amino cerminal half of HC, designated as HN), that translocation domain is not a HN domain of a clostridial toxin. Polypeptides of the invention are useful for the treatment of a disease state associated with neuronal cells. The polypeptides of the invention are useful for the treatment of a disease state associated with neuronal cells. They are useful to treat disorders of the constructs are useful to treat disorders of the constructs are useful to treat disorders of the constructs are useful to treat disorders of the constructs are useful to treat disorders of the constructs are useful to treat disorders of the constructs are useful to treat disorders of the constructs are useful to treat disorders of the constructs are also useful lasent therapy. The present sequence of is modified clostridial heavy chain-superoxide dismutase (MNSOD), MNSOD from Bacillus steacothermophilus, clinker that can be cleaved by thrombin, translocation domain from diphtherial neurotoxin and a neuronal cell-specific binding domain from constructs are sequenced betulinum neurotoxin type F (BONT/F)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               601-VFNYTQMISISDYINKWIFVYITHNRLGNSRIYINGNLIDEKSISNLGDIHVSDNILFKI 660
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New non toxic polypeptide for delivery of a therapeutic agent for the treatment of a CNS disorder comprising a binding domain that translocates the therapeutic agent into the neuronal cells.

The invention relates to a conjugate comprising an injected bacterial effector protein and a carrier that targets the effector protein to a target cell. Pharmaceutical composition of the invention is useful for a treatment selected from promoting or inhibiting survival of cells, preventing and reversing damage to cells; killing cells; promoting or inhibiting the growth of cells, apoptosis, relasse of an inflammatory mediator from cells, division of cells and treating intracellular comparation of cells and treating intracellular infection and regulating nitric oxide release from cells. The invention is useful in the manufacture of a medicament for treating an neuronal cell, for intracellular infection, for interfering with intracellular trafficking, for modulating expression of cell-surface markers and for inhibiting secretion from cells. The invention is also useful for treating Prion disease, Alzheimer disease and wide range of disorders including muscle spasms such as blephorospasm, torticolis and chipment observed to observe translocation domain Gorynebacters such as chronic obstructive pulmonary disease (COPD), bronchitis and asthma. The present sequence is a fusion construct comprising Corynebactersium diphtheriae diphtheriae toxin translocation domain (DipT-HM domain), botulinum type F neurotoxin binding domain (Bory-FHC) from Clostridum botulinum and factor Xa linker peptide and Yersinia pestis targetted effector protien YopT. This sequence is used in

The invention relates to a non toxic polypeptide, for delivery of a therapeutic agent to a neuronal cell, which comprises a binding domain (carboxy terminal half of heavy chain (HC) of a neurotoxin, designated as HC) that binds to the neuronal cell and a translocation domain (amino terminal half of HC, designated as HN), that translocation domain is not a HN domain of a clostridial coxin. Polypeptides of the invention are caseful for the treatment of a disease state associated with neuronal cells. The polypeptide constructs are useful for delivering therapeutic cells. The polypeptide constructs are useful for delivering therapeutic cells. The polypeptide constructs are useful for terat disorders of the CS ubstances to neuronal cells. They are useful for the invention therapeutic cells they are also useful in gene therapy. The present sequence and infection. They are also useful in gene therapy. The present sequence is C. botulinum c2 entrotoxin translocation domain with botulinum neurodesponents.
                                                                                                           ö
                                                                                                                                                                                                                                                     812
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New non toxic polypeptide for delivery of a therapeutic agent for the treatment of a CNS disorder comprising a binding domain that translocates the therapeutic agent into the neuronal cells.
                                                                                                                                                                               752

The specification describes a composition for delivery of SOD to neuronal cells. The composition comprises SOD linked, by a cleavable linker, to a neuronal cell targeting component (NCTC). This component has a domain that binds to a neuronal cell and a domain that translocates the SOD of the composition into the neuronal cell. After translocation, the linker is cleaved to release the SOD. The composition is useful for treating neuronal diseases caused or augmented by exidative stress, such as ischemic stroke, trauma, Parkinson's

C; Comment: The Bource of this protein was an extrachromosomal plasmid.
C; Comment: The precursor is cleaved by endogenous proteinase activity to form light (fradual chains are not toxic when separated). The amino end of the heavy chain (fragment B)
C; Comment: Fragment E forms ion channels in a lipid bilayer. Fragment C binds to ganglid C; Comment: This potent neurotoxin binds to peripheral neuronal synapses, is internalized presynaptic neurons. It inhibits neurotransmitter release by proteolytic cleavage of sy

Belavage of members of the synaptobrevin/VAMP family by types D and F. Dotulinal neurotoxins and tetanus toxin."; Detulinal neurotoxins and tetanus toxin."; J. Biol. Chem. 269:12764-12772(1994).

-!- FUNCTION: Botulinum toxin acts by inhibiting neurotransmitter release. It binds to peripheral neuronal synapses, is internalized and moves by retrograde transport up the axon into the spinal cord where it can move between postsynaptic and presynaptic neurons. It inhibits neurotransmitter release by acting as a zinc endopeptidase that catalyzes the hydrolysis of the 58-Gln-|-Lys-59 bond of synaptobrevins-1 and -2.

-!- CATALYTIC ACTIVITY: Limited hydrolysis of proteins of the neuroexocytosis apparatus, synaptobrevins, SNAP25 or syntaxin. No detected action on small molecule substrates.

-!- COPACTOR: Binds 1 zinc ion per subunit (By similarity).

-!- SUBUNIT: Disulfide-linked heterodimer of a light chain (L) and a heavy chain (H). The light chain has the pharmacological activity, while the N- and C-terminal of the heavy chain mediate channel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This Swiss-Prot entry is copyright. MISCELLANBOUS: There are seven antigenically distinct forms of botulinum neurotoxin: Types A, B, Cl, D, E, F, and G.
SIMILARITY: Belongs to the peptidase M27 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pfam; PF01742; Peptidase MZ7; 1.

                                                                                                                                                                                                                                                                                                                                                                                                                                         i-FUNCTION: Boculinum toxin acts by inhibiting neurotransmitter release. It binds to peripheral neuronal synapses, is internalized and moves by retrograde transport up the axon into the spinal cord where it can move between postsynaptic and presynaptic neurons. It inhibits neurotransmitter release by acting as a zinc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Yashiki T., Oguma K.; "I compare the S'-terminus of the botulinum type E toxin gene from Clostridium butyricum strain BL6340."; ". ```
FUNCTION: Inhibits acetylcholine release. The botulinum toxin FUNCTION: Inhibits acetylcholine release. The botulinum toxin binds with high affinity to peripheral neuronal presynaptic membrane, is then internalized by receptor-mediated endocytosis. The C-terminus of the heavy chain (H) is responsible for the adherence of the toxin to the cell surface while the N-terminus mediates transport of the light chain from the endocytic vesicle to the cytosol. After translocation, the light chain (L) hydrolyzes the 197-cln-l-Arg-198 bond in SNAP-25, thereby blocking neurotransmitter release. Inhibition of acetylcholine release
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  X-RAY CRYSTALLOGRAPHY (3.3 ANGSTROMS).

CATALYTIC ACTIVITY: Limited hydrolysis of proteins of the neuroexocytosis apparatus, synaptobrevins, SNAP25 or syntaxin. No detected action on small molecule substrates.

COFACTOR: Binds 1 zinc ion per subunit.

SUBUNIT: Disulfide-linked heterodimer of a light chain (L) and a
                                                                                                                                                                                                                                                                                                                                                                                                      PROTEIN SEQUENCE OF 448-482.

and cervical dystonia. Also used for the treatment of hemifacial spasm and a number of other neurological disorders characterized by abnormal muscle contraction.
MISCELLANEOUS: There are seven antigenically distinct forms of botulinum neurotoxin: Types A. B. Ci. D. E. F. and G. SIMILARITY: Belongs to the peptidase M27 family.

-1- FUNCTION: Inhibits acetylcholine release. The botulinum toxin binds with high affinity to peripheral neuronal presynaptic membrane, is then internalized by receptor-mediated endocytosis. The C-terminus of the heavy chain (H) is responsible for the adherence of the toxin to the cell surface while the N-terminus mediates transport of the light chain from the endocytic vesicle to the cytosol. After translocation, the light chain (L) hydrolyzes the 197-Gln-|-Arg-198 bond in SNAP-25, thereby blocking neurotransmitter release. Inhibition of acetylcholine release
                                                                                                                                                                                                                                                                                                                          CATALYTIC ACTIVITY: Limited hydrolysis of proteins of the neuroexocytosis apparatus, synaptobrevins, SNAP25 or syntaxin. No detected action on small molecule substrates.

SUBUNIT: Disulfide-linked heterodimer of a light chain (L) and a heavy chain (H) (By similarity)
SUBCELLULAR LOCATION: Secreted.
